

## Task 1

```
doreen@Azubi: ~/container-det x + v
doreen@Azubi:~$ mkdir container-detective
doreen@Azubi:~$ cd container-detective
doreen@Azubi:~/container-detective$ docker --version

The command 'docker' could not be found in this WSL 2 distro.
We recommend to activate the WSL integration in Docker Desktop settings.

For details about using Docker Desktop with WSL 2, visit:
https://docs.docker.com/go/wsl2/

doreen@Azubi:~/container-detective$ docker --version
Docker version 29.5.2, build 79eb04c
doreen@Azubi:~/container-detective$ docker ps
CONTAINER ID   IMAGE     COMMAND   CREATED   STATUS    PORTS     NAMES
doreen@Azubi:~/container-detective$
doreen@Azubi:~/container-detective$
```

```
Windows PowerShell x OC | Cloud migration project task x doreen@Azubi: ~/container-det x + v
doreen@Azubi:~/container-detective$ docker --version
Docker version 29.5.2, build 79eb04c
doreen@Azubi:~/container-detective$
```

## Task 2

The image consists of two screenshots of a Windows PowerShell terminal window. The top screenshot shows a nano editor editing a file named 'Dockerfile'. The content of the Dockerfile is as follows:

```
FROM python:3.9
WORKDIR /app
COPY app.py .
RUN pip install flask requests
EXPOSE 8080
CMD ["python", "app.py"]
```

The bottom screenshot shows the same nano editor editing a file named 'app.py'. The content of app.py is as follows:

```
from flask import Flask
app = Flask(__name__)

@app.route('/')
def home():
    return "Mystery App Running!"

if __name__ == '__main__':
    app.run(host='0.0.0.0', port=5000)
```

Both screenshots show the Windows taskbar at the bottom with the date 6/8/2026 and time 9:08 PM.

## Challenge 1

**docker build -t mystery-app .** successfully builds the image

**docker run -d -p 8080:8080 --name mystery mystery-app** got a bug, reason is the ports were not match, also the syntax should be **docker run -d --name mystery -p 8080:8080 mystery-app** instead

Answer: The host port (dockerfile port which is exposed to 8080) should be mapped to the container port (which is exposed to port 5000)

## Task 3

```
Windows PowerShell x OC | Cloud migration project task x doreen@Azubi: ~/container-det x + v
GNU nano 7.2 Dockerfile.fixed *
FROM python:3.9
WORKDIR /app
COPY app.py .
RUN pip install flask requests
EXPOSE 8081
CMD ["python", "app.py"].
